## Manifesto for Agile Software Development

We are uncovering better ways of developing software by doing it and helping others do it.  
Through this work we have come to value:

**Individuals and interactions** over processes and tools  
**Working software** over comprehensive documentation  
**Customer collaboration** over contract negotiation  
**Responding to change** over following a plan

That is, while there is value in the items on the right, we value the items on the left more.

# Manifesto for Agile Software Development

We are uncovering better ways of developing software by doing it and helping others do it.  
Through this work we have come to value:

Individuals and interactions over processes and tools  
Working software over comprehensive documentation  
Customer collaboration over contract negotiation  
Responding to change over following a plan

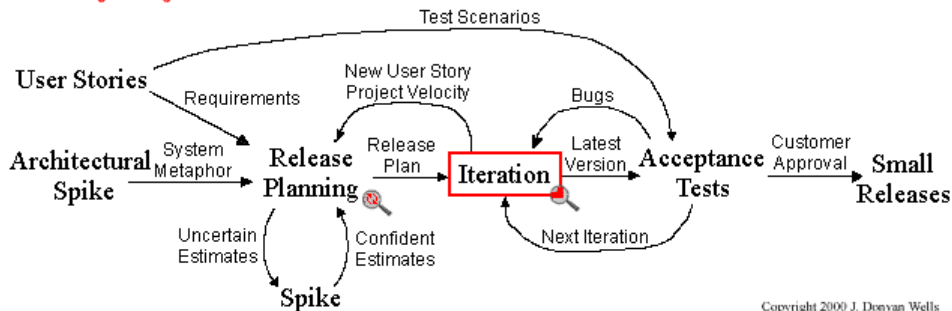

That is, while there is value in the items on the right, we value the items on the left more.

# Agile: Practices

## Extreme Programming Project

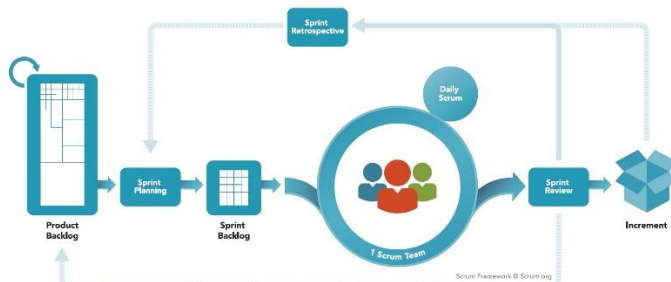

As a Doctor I want to have a list of most Common ICD10 Conditions  
Story Point: 13  
Priority: 2

Copyright 2000 J. Donvan Wells

## SCRUM FRAMEWORK

**TDD**  
ALL CODE IS GUILTY  
UNTIL PROVEN INNOCENT

**SCRUM**

# So, what is Scrum?

Scrum is an **agile** process that allows us to focus on delivering the **highest business value** in **the shortest time**

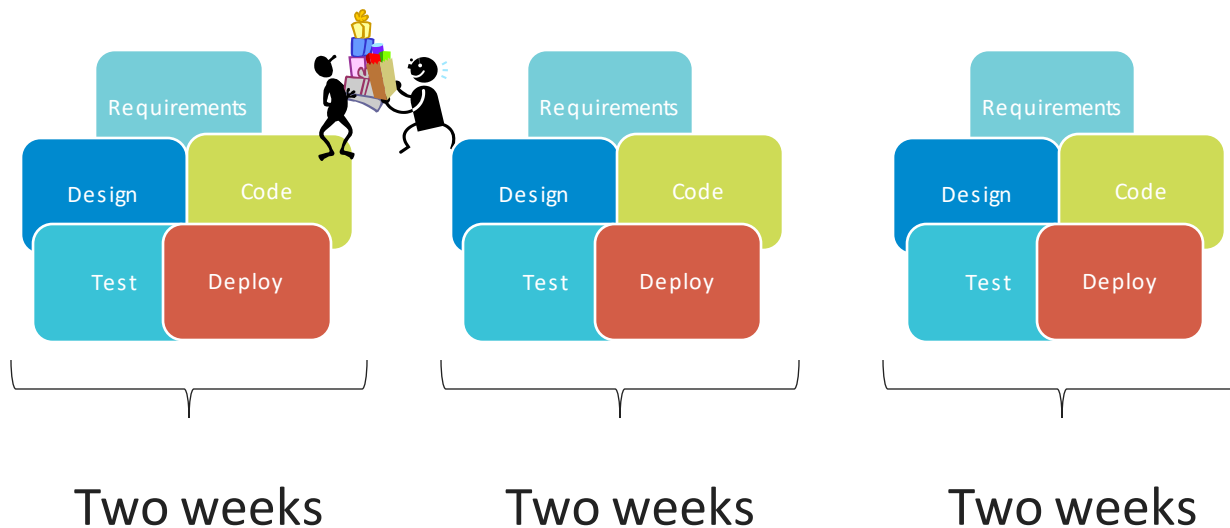

The **business sets the priorities. Teams self-organize** to determine the best way to deliver the highest priority features

Every week to a month anyone can see **real working software** and decide to release it as is or continue to enhance it

# Scrum Sprints

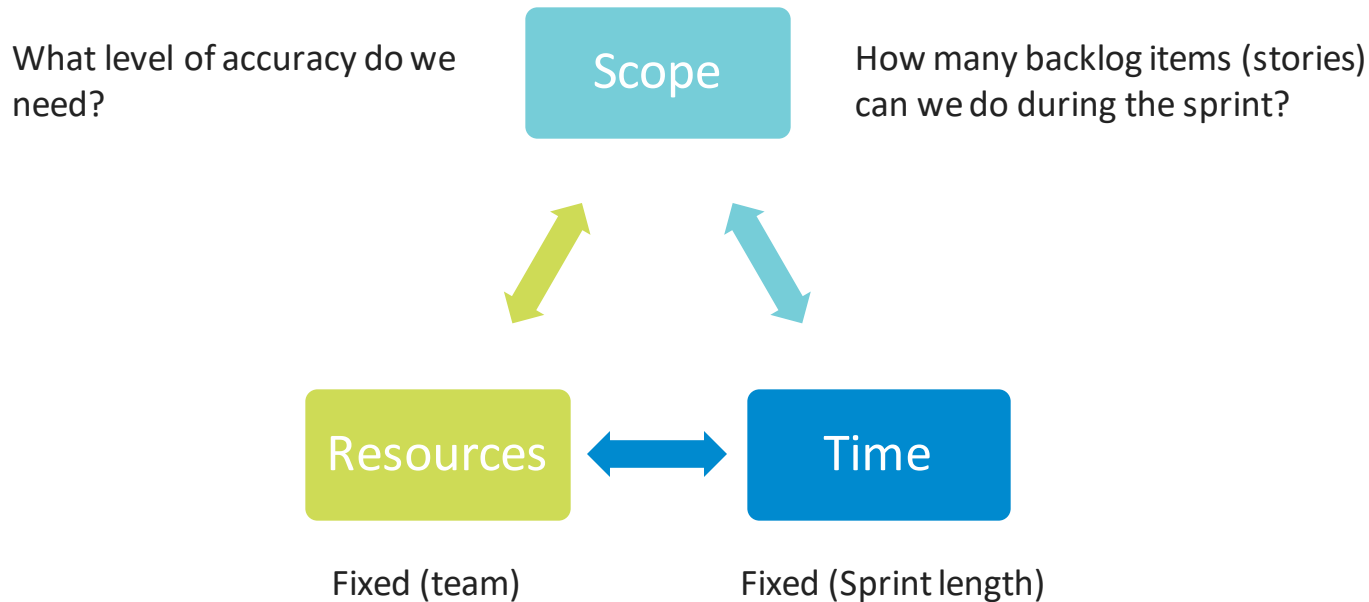

# Sprints

- Scrum development makes progress in a series of iterations (called “sprints”).
- Constant duration, 1–4 weeks.
- Product is designed, coded, tested and documented during the sprint.
- No changes during sprint!

# Iron triangle

---

# PO adds more work

- Better to **lock** the Sprint scope for new stories!
- Create new stories for new sprint if a lot of details were discovered.
- Change priorities only if team is comfortable.

# Scrum is not a mini-waterfall

Not like this....

Like this!

by Henrik Kniberg

# Cancelling the Sprint

**CANCELLED**

Sprints may be cancelled early, i.e., before the time-box expires.

Only by the Product Owner

Prefer adjusting Sprint Scope

A Sprint would be cancelled if the Sprint Goal becomes obsolete

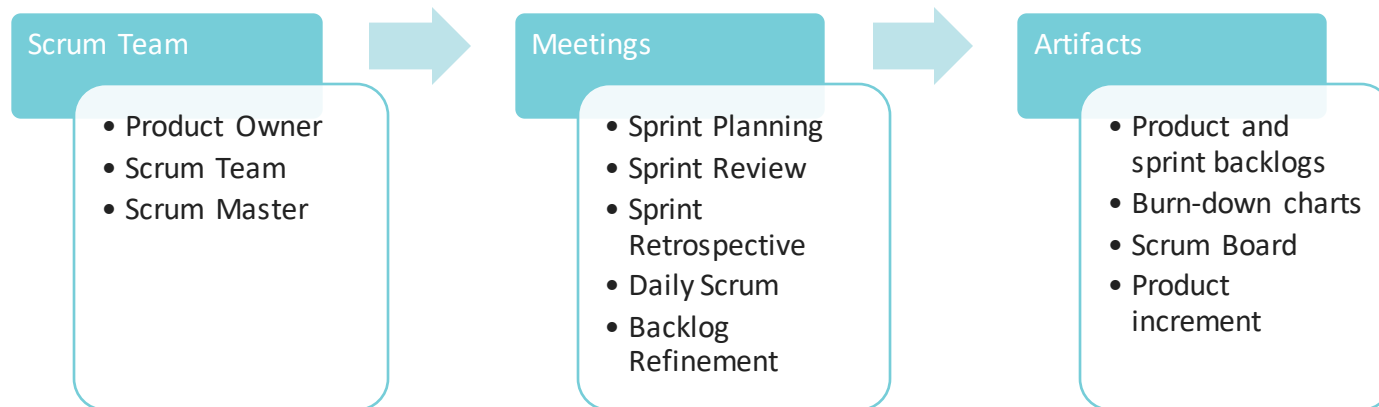

- Reasons to cancel may include changes in competition, business, or technology feasibility.

After a Sprint cancellation, re-plan the Sprint.

# SCRUM FRAMEWORK

# Scrum Framework

# SCRUM ROLES

# Product Owner

---

- Responsible for the profitability of the product (ROI)
- Defines the features of the product
- Decides on release date and content
- Prioritizes features according to market value
- Has the vision of the product
- Accepts or rejects work results

# Development Team

---

- Cross-functional **self-managing** group up to **10**
- Attempts to build a “potentially shippable increment” each Sprint
- Members should be full-time (may be exceptions, e.g., DBA)
- Ideally, no titles but rarely a possibility
- Membership should change only between sprints

# Scrum Master

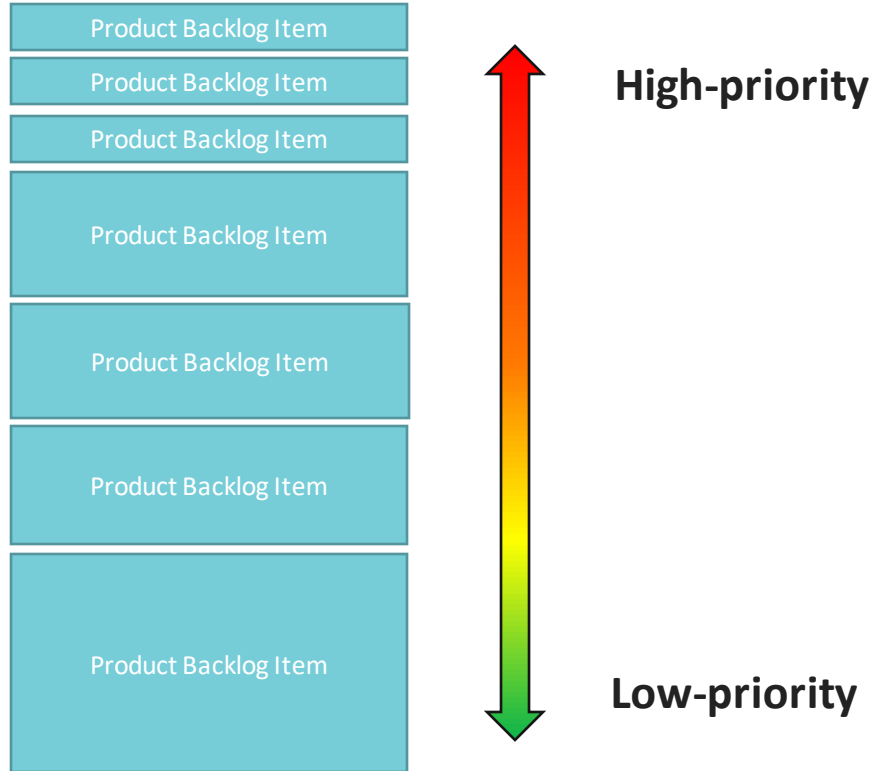

---

- Responsible for enacting Scrum values and practices
- Removes impediments
- Ensures that the team is fully functional and productive
- Enables close cooperation across all roles and functions
- Not manager, but shields the team from external interferences

# SCRUM ARTIFACTS

# Product Backlog

# Sprint Backlog

- The set of PBI selected for the Sprint
- Plan for delivering the product Increment
- Makes visible all of the work for the Sprint

ToDo List		
Story	Estimation	Priority
As a user I want to be able to reset my password	1	1
As a user I want to edit items	3	2
As a user I want to export data	2	3
As an administrator I want to define KPI's for my sales team	4	4
As a user I want to view my data on mobile	5	5
As an administrator I want to send alerts when new leads come in	2	6
As a user I want to create a report of my data	5	7
As a user I want to update my reminder settings when a date is added	3	8
As a user I want filtering enhancements	4	9
As an administrator I want to configure views of data	5	10
Total	34

# Burndown Chart

Estimated Story Points, Total

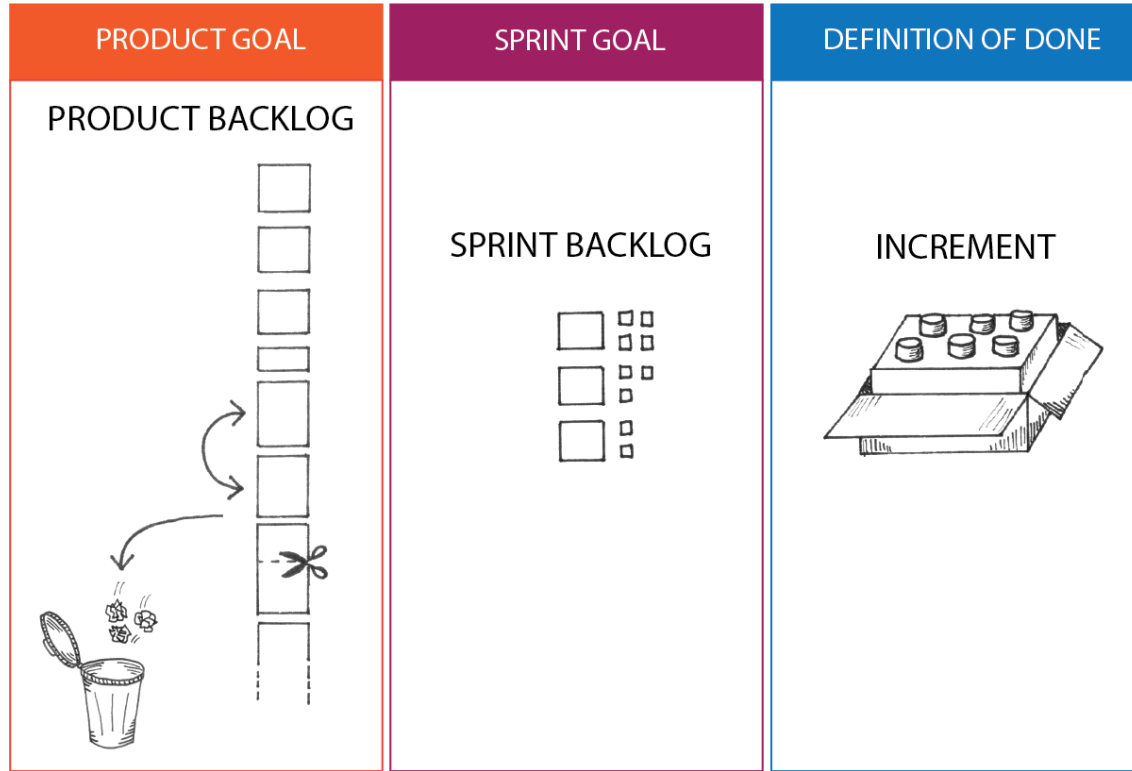

# Increment

- The Increment is the sum of all PBIs completed during a Sprint and value of the increments of all previous Sprints.
- At the end of a Sprint, the new Increment must be “Done”
- Definition of Done document is used to create increment

# Sprint Retrospective

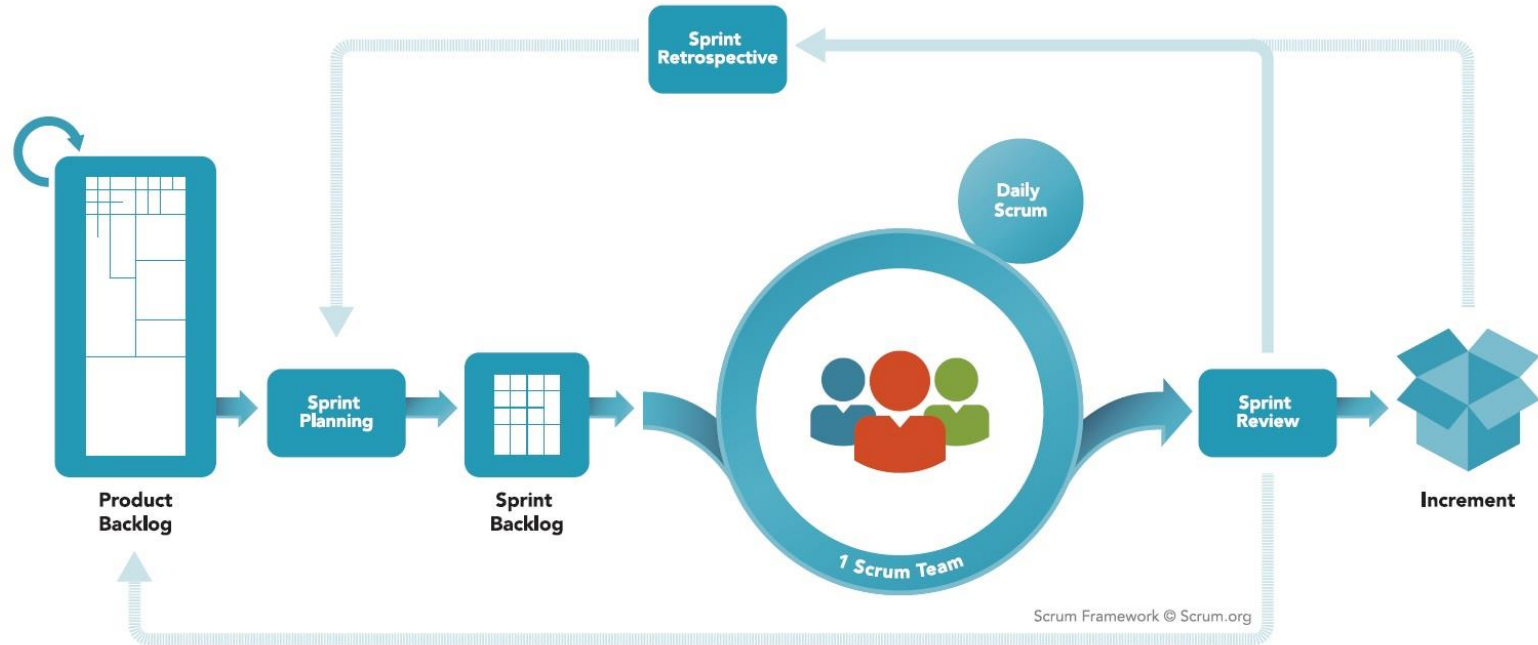

# Scrum Events Quick Reference

Event	Inspection	Adaptation	Who Attends	Time-box for 1 Month
<b>Sprint Planning</b>	Product Backlog	Sprint Goal, Forecast, Sprint Backlog	Scrum Team	8 hours
<b>Daily Scrum</b>	Progress toward Sprint Goal	Sprint Backlog	Development Team	15 minutes (always)
<b>Sprint Review</b>	Increment, Sprint, Product Backlog	Product Backlog	Scrum Team Stakeholders	4 hours
<b>Sprint Retrospective</b>	Sprint	Actionable and committed improvements	Scrum Team	3 hours

Every element of Scrum serves empiricism.

# Helicopter View for Scrum

## SCRUM FRAMEWORK

## AGILE AND REQUIREMENTS

# Product Vision

Vision Statement  Phrase or sentence to summarise the vision			
Target group  Which market segment does the product address? Who are its target customers and users?	Needs  Which needs does the product fulfil and how does it create value for its customers and users? Which emotions does it evoke?	Product  What are the three to five top features that are crucial for the success of the product? What will the product roughly look like? What are its unique selling points?	Value  How is the product going to benefit the company? For instance, what are its revenue sources? What is the cost structure? Which sales channels will be used? Will it save cost?

# Task, User Story, Epic, Theme

Theme Increase Website Traffic				
Epic Add new Video Section		Epic Improve Login Page Usability		
User Story	User Story	User Story As a User, <i>I want to</i> have the validation on the login page, <i>So that</i> I can easily see when/if I make a mistake		User Story
Sub-task	Sub-task	Sub-task	Sub-task	Sub-task

# Start with Themes and Epics

---

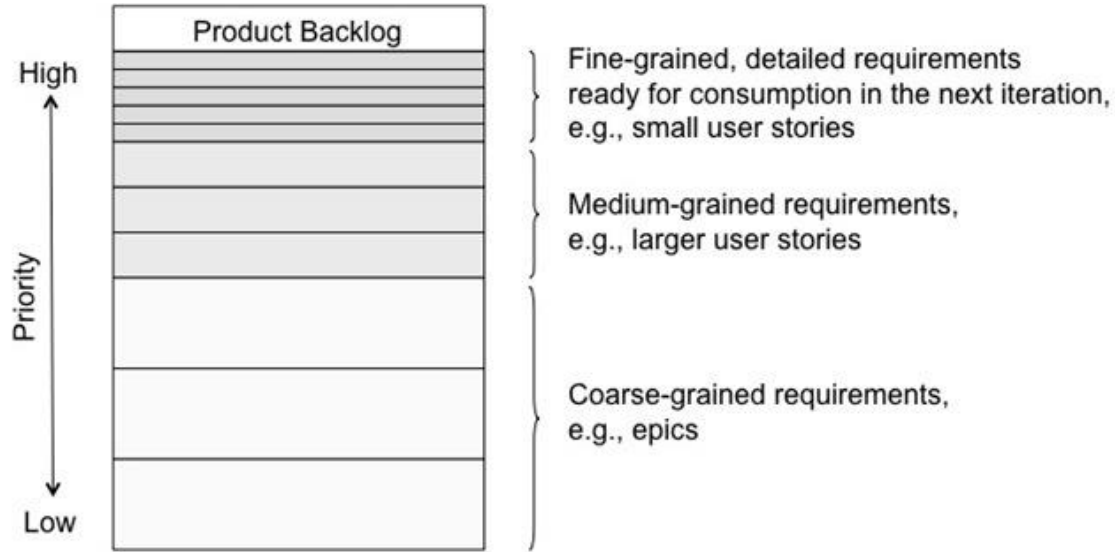

# Slice the cake

# Slice the cake

# Backlog

...a piece of  
functionality valuable  
for the end-user.

## Conversation

## Confirmation

# User story: Card

A written description of the user story for planning purposes and as a reminder, starting point for discussion.

# Card

---

As a [user role] I want [activity] so I can [benefit]

As a [user role] I can [activity] so that [benefit]

**User role** – who (new user, guest, job-seeker)?

**Activity** – functionality, action of the system, what?

**Benefit** – value for the end-user, why?

# User Story Card examples

---

- **As a** recruiter **I want** to search by job-seeker's name **so** I can find all resumes of job-seeker
- **As a** recruiter **I want** to search resumes by job-seeker's name
- Search resume by job-seeker's name
- Search resume
- Search

# Non-estimable uncertain stories

---

- **Spike** is an experiment to gain knowledge so that developers can estimate the story.
- Research, prototype, implementing some code or any other way to drive down the uncertainty to be able to estimate the story.
- *Technical spikes* – research technical approaches, e.g. build vs. buy, performance.
- *Functional spikes* – get feedback on how the user shall interact with the system, prototyping.

# Spike Example

---

## User Story:

**As** a physician,  
**I want to** send HL7 data about the patient to RIS,  
**so that** I can be prepared for screening.

**What is HL7?**

Be able to explain to the team the structure and required fields of HL7 for transferring data to RIS, so team can estimate the story (2 days).

## PLANNING AND ESTIMATION

# Plan

---

list of steps with timing and resources,  
used to achieve an objective.

# Planning

---

# Planning

---

# Planning

---

# Estimation

# Estimation

---

## PROBLEMS WITH SOFTWARE ESTIMATES

- Estimating the unknown
- Estimates are optimistic
- Estimated time is always used
- Business rely on estimations heavily

## AS THE RESULT...

- Estimates are never correct
- Re-estimation takes a lot of time

## Estimating size in story points or in T-shirt sizes

# Story Points

---

- A relative term to measure the effort:

- 1, 2, 3, 5, 8, 13, 21

- X Small, Small, Medium, Large, X Large

- Not related to hours

- Intended to quickly estimate how hard is the task and use the result for planning

# Techniques

## EXPERT'S OPINION

- Fast
- *Requires cross-functional experts*
- *Prejudiced*

## ANALOGY

- Reuse of experience – estimating against similar completed stories
- *Need to have similar tasks*
- *Details are not considered*

## DISAGGREGATION

- Splitting to smaller pieces
- *May take a long time*

# Planning Poker – How?

## Planning Poker®

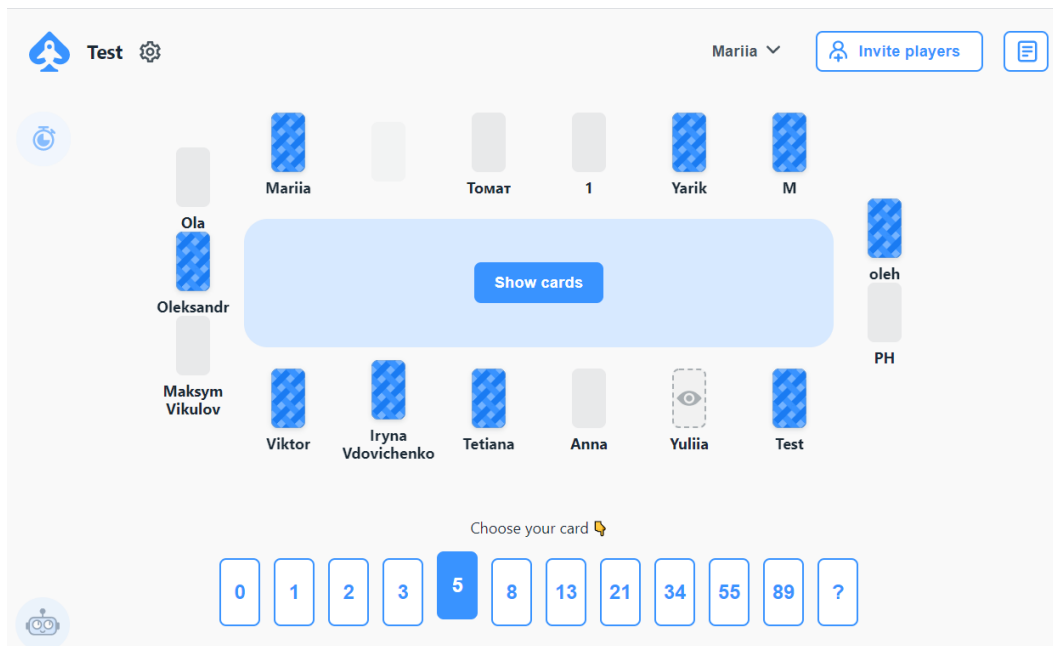

- An iterative approach to estimating
- Steps
  - Each estimator is given a deck of cards, each card has a valid estimate written on it
  - Customer/Product owner reads a story and it's discussed briefly
  - Each estimator selects a card that's his or her estimate
  - Cards are turned over so all can see them
  - Discuss differences (especially outliers)
  - Re-estimate until estimates converge

© Copyright Mountain Goat Software®

# Interaction

[HTTPS://PLANNINGPOKERONLINE.COM/](https://planningpokeronline.com/)

# Planning Poker – when?

---

- 1) Before the 1<sup>st</sup> sprint – estimating initial set of stories.
- 2) During backlog refinement sessions.
- 3) Planning sessions

PO, SM and Team are playing.

# Planning Poker – why?

---

- **Multiple expert opinions.**
- The people that estimate **will do the work.**
- Discussion brings **justification** and more accurate estimate.
- **Details are discovered.**
- It is **time boxed.**
- It is **fun.**

Q&A
